DETAILED ACTION

Election/Restrictions

1. Claims 1-13 and 28-46 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected group, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on March 1, 2006.

Claim Rejections - 35 USC § 102/103

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 14-27 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Gao et al ("Synthesis and Characterization of Water-Soluble Hyperbranched Poly(ester amine)s from Diacrylates and Diamines").

The Gao et al reference discloses hyperbranched poly(ester amine)s synthesized from diacrylates, reading on the presently claimed bis(acrylate ester) monomer, and diamines, wherein the diamines contain a secondary amino group and a primary amino group, such as N-

ethylethylenediamine, 1-(2-aminoethyl)piperazine, reading on the presently claimed diamine monomer.

The disclosure of the reference meets the requirements of the present claims in terms of the types of materials added. Given the similarity of the reference products to those presently claimed, both in terms of types of reactants used and process of preparation, it is reasonable to presume that the former would inherently contain the same structural units having at least one secondary amine linkage and at least one tertiary amine linkage as the latter. The onus is shifted to applicants to establish that the product of the present claims is not the same as or obvious from that set forth by the reference.

Response to Arguments

5. Applicant's arguments filed October 19, 2006 have been fully considered to the extent that the rejection based on Lynn et al has been withdrawn.
